

GAUDI

General production advice ware potatoes

- Firm cooking
- Very attractive bright skin
- Dark yellow flesh
- Uniform tuber size and shape
- Good resistance to spraing

Morphology

Cooking type	AB - Slightly firm
Maturity	69 Medium early
Yield mature	104 Moderate high
Tuber size	81 Large
Tuber shape	Round oval / Oval
Number of tubers	12-14
Flesh after cooking	Dark yellow
Skin colour	Yellow

Tolerances

Dormancy period	67 Medium
Metribuzin sensitivity	73 Moderately sensitive
Foliage development	73 Strong
Internal bruising	10 Not sensitive
Little Potato disorder	10 Sensitive
Dry matter content	18,5
UWW	335

Resistances

Spraing	Highly resistant
Foliage Blight	Very susceptible
Tuber Blight	Slightly susceptible
Common scab	Slightly susceptible
Powdery scab	Susceptible
PVYn	Very susceptible
Yntn tuber tolerance	Tolerant

PCN Resistance

Ro1	Ro2/3	Pa2	Pa3	
9	+1	+1		+ No official analysis / Stet own analysis
Wart disease				
F1	F2	F6	F18	
10	+4	+1	+1	

Fertilizer

- Adapt fertilisation to soil analysis.
- Nitrogen (N): approx. 250 kg N/ha inclusive of soil supply.
- Do not apply any top dressing.
- Potassium and phosphate fertilisation as standard advice.
- Manganese and magnesium will encourage a strong foliage and prevent premature senescence.

GAUDI

General production advice ware potatoes

Pre-treatment and planting

- GAUDI has a medium dormancy.
- Allow the seed to acclimatize to the local conditions before planting.
- Always treat GAUDI seeds and soil against Rhizoctonia.
- The variety has a slight susceptibility to little potato disorder, avoid planting in cold soil.
- Can be planted with small white buds but good pre-sprouting can advance the crop.

Plant populations

Seed size	Plant population/ha	Row distance	
		75 cm	90 cm
-28/35	55.000	24	20
-35/55	40.000	33	28

- Plant depth: Normal.

Growing attentionpoints

- moderate development
- GAUDI has a good tolerance to metribuzin (Sencor).
- Despite the good Phytophthora resistance, a regular preventive application is advised given the long growing season.
- GAUDI is fairly resistant to spraing.

Haulmkillling and harvest

- Only a mature crop will give a good storable product.
- Leave enough time between haulm killing and harvest as GAUDI doesn't have a quick skinset.
- GAUDI is moderatly susceptible to bruising. Reduce drop heights and avoid mechanical damage.

Storage

- GAUDI has a good dormancy, therefore ambient storage can be used for the first months after harvest.
- Take care of the wound healing period
